

National Concussion Tracking

By Global Wellness Tracking

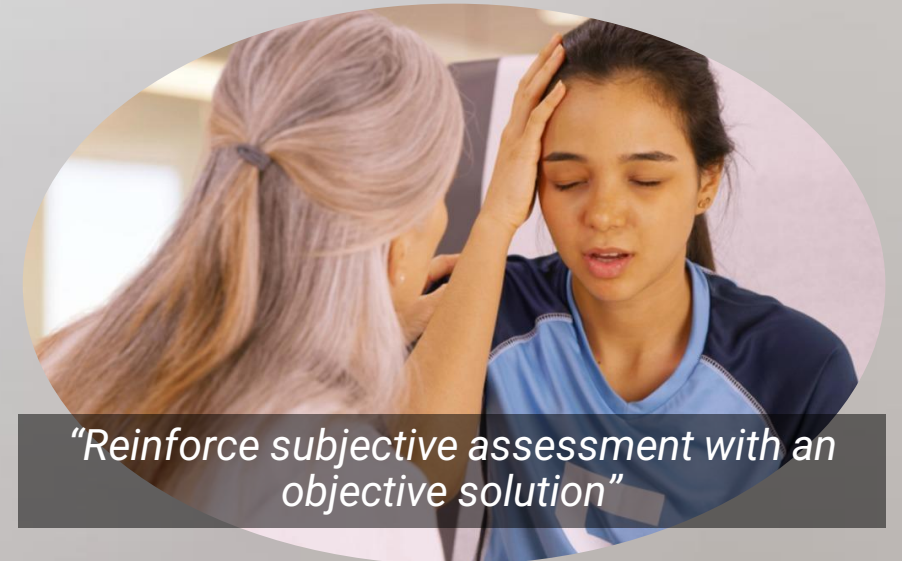

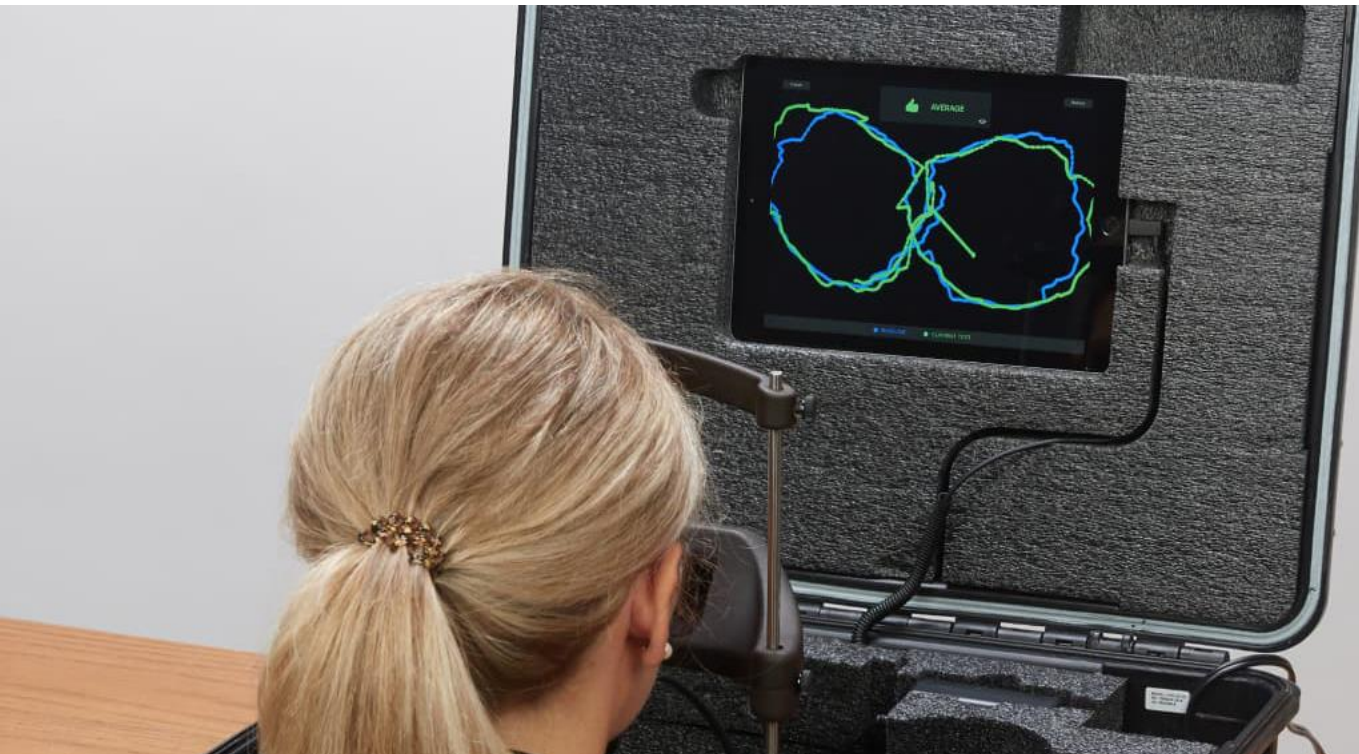

The project options for schools, sporting clubs and corporate workplaces

Rest easy with an EyeGuide assessment provided under reliable conditions by a GPTQA trained and accredited professional

The national project offers sporting clubs, schools and workplaces an easy solution on baselining and post-knock assessment by trained professionals with a direct connection to allied health practitioners for immediate intervention.

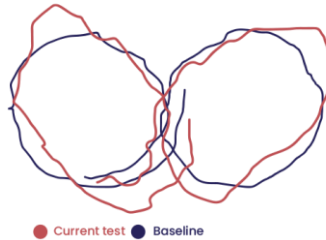

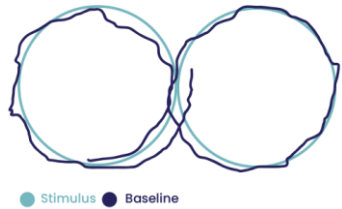

Global Wellness Tracking tools include objective EyeGuide ocular tracking as a baseline to ensure future assessments can be accurately compared to identify change plus reinforcement of traditional and proven SCAT5 assessments by a trained professional. These test moments are supported by patient monitoring in the free online application with education resources and guidelines for parents, coaches, teachers and volunteers.

Traditional subjective assessment has supported obvious concussion symptoms and now professionally applied EyeGuide can provide an objective framework to add further safety to assessment and diagnosis of risk potential.

“Reinforce subjective assessment with an objective solution”

The process flow

1. Baseline

Global Wellness Tracking provide professionally managed events to baseline the entire staff or club member base.

Clients are provided 3 baseline tracks to maximise validity in a controlled environment.

2. Incident

The athlete, staff member, student or community member is involved in an incident where there is a potential concussion risk.

Guidelines on site assess the person and react according to symptoms.

3. Follow Up

The client visits a local GWT network partner who specialises in allied health and is trained on both GPTQA and concussion assessments and intervention.

These venues are situated within the clients local area.

4. Diagnosis and Support

A professional diagnosis is provided and referral to tracking or intervention as needed.

Online tracking tools are provided to support the client (and parent) for the recovery process.

5. Return

Further assessment may be required to check rehabilitation and recovery success in order to return the client to the field of play, place of work or school safely.

Compare the options:

	Professionally Serviced Under GPTQA Model		Purchase Model
	Baseline Assessment	Follow Up Assessment	Self-Assessment
EyeGuide professional system	-	-	\$12,500.00 exc GST
EyeGuide monthly subscription	-	-	\$300.00 exc GST
GPTQA training on applying EyeGuide	-	-	\$99.00 per person inc GST Recommended
Professional GPTQA accredited staff	Yes	Yes	-
Assessment location	Remote (i.e. club rooms/office)	Fixed venue within community	-
Allied health support for <u>immediate</u> intervention	N/A (baseline only)	Yes	-
Online visualisation and result access	Yes – GWT platform	Yes – GWT platform	Yes – EyeGuide platform
